

Box

Michael Koenig 2006

FLORA 

The Box family ranges from a container for large plants, such as shrubs and bushes used in landscape design, to the smallest box for a cactus or table-top candle. The many uses in parks, entrances, and on a terrace, windowsill or table provide not only many possible applications, but also an opportunity to make deliberate use of repetitive shapes for architect-inspired designs. Functional elements such as handles, rollers or forklift pockets make it easy to move the boxes.

Box Giant

Michael Koenig 2012

FLORA 

Big. Bigger. Biggest. The almost gigantic dimensions of the "Elevation" and "Box" planters create new opportunities for outdoor structures and designs. Tall plants have a style all of their own when used for green architecture. The new types can be positioned on hard surfaces, and also used as moveable objects. Special features make it easy to handle the planters, which have a volume of approximately 900 litres.

Planting inserts

Removable planter inserts made of high-quality aluminium are a standard fitting for every FLORA plant container, only the intended use determines whether a water-permeable or a water-proof insert is the right choice, the double-wall design, which creates a layer of air between the plant container and the planter insert, ensures that the root system is protected against heat and frost

FLORA 

Using plants outdoors

Ventilation slits for oxygen in the root systems, water reservoir, insulating air layer for protection against heat, drying out or frost

Using plants indoors

Watertight, light aluminium, optionally with water reservoir and water level indicator
